Proposed amendment A of claim 1:

1. (Currently Amended) A method for providing secure transmissions across a network comprising a client device and a server, the method comprising:

at the client device, generating a stream of watermark bits;

generating a plurality of watermarks, each of the plurality of watermarks comprising an index number and a portion of the stream of watermark bits;

inserting ~~at least one~~ each of the plurality of watermarks into ~~each a~~ header of a respective one of a plurality of outgoing packets;

receiving, at the server, the plurality of outgoing packets; and

determining if a received packet is valid based on the watermark in the header of the received packet.

Proposed amendment B of claim 1:

1. (Currently Amended) A method for providing secure transmissions across a network comprising a client device and a server, the method comprising:

at the client device, generating a stream of watermark bits;

generating a plurality of watermarks, each of the plurality of watermarks comprising an index number and a portion of the stream of watermark bits;

inserting at least one of the plurality of watermarks into each header of a plurality of outgoing packets;

receiving, at the server, the plurality of outgoing packets; and

determining if a received packet is valid based on the watermark in the header of the received packet,

wherein generating the stream of watermark bits includes generating a stream of watermark bits from an authorization and synchronization packet previously exchanged between the client device and the server.
